

Name: **MOHINI SONKAR**

Date: **27-Jun-2019**

Ref By: **Dr GEETA PAWAR**

Dear **Dr GEETA PAWAR**

Thanks for referring **MOHINI SONKAR** for the sonography of abdomen and pelvis.

Liver: appears normal in size, shape and echotexture. No focal lesion is seen. No dilatation of IHBR is seen. Portal vein and intra hepatic vessels appear normal. **Multiple tiny calcific foci are seen in right lobe of Liver in cluster, likely to be due to old calcified lesions.**

Gall Bladder: is well distended and appears normal. No wall thickening or calculus is seen. There is no evidence of cholecystitis.

Pancreas: appears normal. No focal lesion is seen. **Spleen:** appears normal in size and shape. No focal lesion noted.

Kidneys: appear normal in size, shape and echotexture. No hydronephrosis or calculi are seen in both Kidneys, except for few tiny calcular concretions in upper pole calyx of left kidney. The corticomedullary differentiation is well maintained in both kidneys.

Urinary Bladder: is well distended and appears normal. No calculi or wall thickening is seen.

Uterus: appears normal in size, shape and echotexture. Uterus measures 8.5 x 3.5 x 4.5 cm. The midline endometrial echo measures 7 mm. Cervix appears normal. No focal uterine lesion is seen. No intrauterine gestation sac is seen.

Right ovary appears normal and measures 6.2 cc in volume.

A 37 x 45 x 55 mm thin walled cyst is seen in left ovary with internal echoes and fluid fluid levels in the cyst. This is suggestive of an Endometriotic cyst. A small 6 mm echogenic mural nodule is also seen in the inferior portion of the cyst. Rest of the left ovarian parenchyma appears BULKY and measures 10 cc in volume and shows morphology of PCOS.

Retroperitoneal vascular structures look normal. No retroperitoneal lymphadenopathy is seen. No Pelvic free fluid is seen. Bowel loops show normal peristalsis.

Impression:

- **37 x 45 x 55 mm thin walled Endometriotic Left ovarian cyst, as described above. SOS correlation with CA-125 is suggested.**
- **Rest of the left ovarian parenchyma appears BULKY and measures 10 cc in volume and shows morphology of PCOS.**
- **Few tiny calcular concretions in upper pole calyx of left kidney**

Kindly correlate clinically.

Dear Dr **GEETA PAWAR**

Thanks for referring **MOHINI SONKAR** for the sonography of abdomen and pelvis.

Liver: appears normal in size, shape and echotexture. No focal lesion is seen. No dilatation of IHBR is seen. Portal vein and intra hepatic vessels appear normal. **Multiple tiny calcific foci are seen in right lobe of Liver in cluster, likely to be due to old calcified lesions.**

Gall Bladder: is well distended and appears normal. No wall thickening or calculus is seen. There is no evidence of cholecystitis.

Pancreas: appears normal. No focal lesion is seen. **Spleen:** appears normal in size and shape. No focal lesion noted.

Kidneys: appear normal in size, shape and echotexture. No hydronephrosis or calculi are seen in both Kidneys, except for few tiny calculi concretions in both kidneys. The corticomedullary differentiation is well maintained in both kidneys.

Urinary Bladder: is well distended and appears normal. No calculi or wall thickening is seen.

Uterus: appears normal in size, shape and echotexture. Uterus measures 8.5 x 3.5 x 4.5 cm. The midline endometrial echo measures 9 mm. Cervix appears normal. No focal uterine lesion is seen. No intrauterine gestation sac is seen.

Right ovary appears normal and measures 6.4 cc in volume.

Bulky left ovary measuring 23 cc. It appears poly-follicular (more than 12 follicles). However, no significant PCOS pattern is seen in left ovary. Resolution of previously seen large cyst is seen in left ovary.

Retroperitoneal vascular structures look normal. No retroperitoneal lymphadenopathy is seen. No Pelvic free fluid is seen. Bowel loops show normal peristalsis.

Impression:

- **Resolution of Endometriotic Left ovarian cyst.**
- **Bulky left ovary measuring 23 cc. It appears poly-follicular (more than 12 follicles). However, no significant PCOS pattern is seen in left ovary**
- **Normal right ovary.**
- **For few tiny calculi concretions in both kidneys.**

Kindly correlate clinically.
